Technically Instant

Information Technology Company

Overview

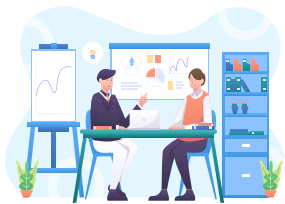

With several years of experience, we, Instech Solution at in Bhuj, Gujarat, are leading the IT Industry with support staff, tools and processes to effectively manage your network infrastructure and support key applications. We work in partnership with you to develop a vision and turn it into reality, drawing on our decades of experience we advise you to make the best changes in your information and technology got your business to outgrow every boundary set by you as well as the industry that you survive in.

Our aim is to provide the best services in information technology to help our clients their work easily and upgrade infrastructure day by day with us

Our Services

We provide a comprehensive range of information technology services based on our clients' specific needs using our extensive knowledge of IT,

IT CONSULTANT

The IT consulting service providers assess the needs of a business and company to determine which IT pathway would be best for them based on their goals/requirements. Afterward, they may help clients deploy selected IT Services and maintain them.

NETWORK INFRASTRUCTURE MANAGEMENT

The business's network infrastructure typically includes its internet connectivity and internal networking between computers and other devices. Network services start with the configuration of infrastructure at your location, including setting up servers, installing firewalls for preventing malicious traffic, etc.

Network management also refers to monitoring the network to spot and react to abnormal traffic and intrusions. Businesses with remote access, intricate payment systems and other specific network types require round-the-clock monitoring.

NETWORK SECURITY

Data is a key component of any organization. Although data is an invaluable asset in many important decisions, strategies and plans, it's useless without the ability to seamlessly share and safeguard it.

Therefore, one of the most demanded IT support services is network security. Providers specializing in this service ensure that their clients' data remains under lock.

In addition to managing network systems, businesses need robust network policies. These could include preventing outside logins into the system, requiring multi-factor authentication (MFA), cybersecurity measures implementation, installing virtual private networks (VPNs) and other steps.

CCTV SURVEILLANCE SYSTEM

Closed Circuit Television (CCTV) surveillance is an important tool to successfully monitor premises and deter crime. Large number of businesses and government agencies use CCTV to monitor and collect video/audio evidence.

Wise Tech Group deployed and engaged in maintaining medium to enterprise size CCTV surveillance systems consisting of hundreds of cameras. We deployed surveillance system that allow our customers to monitor multiple locations from a single Security Operations Center (SOC).

Our engineers have knowledge and necessary field experience to design and implement the system that will meet your needs and budget, while giving you flexibility to expand as your business growth.

DATA STORAGE AND MANAGEMENT

As an extension of our previous points, another important service related to data is, well, data storage and management. Since data is crucial for all businesses and companies no matter their scope and background, one of the highest paying managed IT services is data storage and management.

Usually, managed IT service providers set up servers and databases that host the company's data. They not only store their client companies' data but also come up with strategies and techniques that allow easy and efficient access to it, resulting in companies/businesses having more time to focus on other key areas and tasks.

Beyond data storage, hosting and security measures, sensitive data needs to be regularly backed up. Backup solutions protect the data and mitigate potential information loss by storing copies of data on external hardware or online platforms, such as a cloud service. Information backup services can help protect your business's information should any issues occur, like a power outage or system failure.

CYBERSECURITY

Cybersecurity is an intrinsic part of each of the IT services listed above. However, it's worth discussing on its own because it's a fairly complex and constantly evolving field.

While many of the above-mentioned services cover cybersecurity to some degree, if you are at particular risk from a targeted attack, it's crucial to invest in "heavier armor," so to speak.

IT service providers typically keep track of all the trends and shifts, as well as invest in the necessary technologies and skills to keep themselves and their clients secure. In turn, you don't need to distract your internal IT department from keeping up with these issues. Instead, you can focus on your core goals.

FIRE ALARM SYSTEMS SERVICE

Fire Services is a full-service, non-proprietary fire alarm inspection, maintenance, installation, and central station monitoring company. From routine fire alarm inspections to large-scale upgrades, Fire is the company you can count on to keep your fire alarm equipment maintained and within code.

As your fire and security partner, we will maintain your existing fire alarm system or design and install a new one. We can work with you to create a plan to migrate your outdated fire alarm systems to newer, addressable systems often recommended by the local. We can also provide a phased plan to help with budgeting upgrades. Our reasonably priced fire alarm inspection and service rates set us apart from our competition.

WEB DESIGN AND DEVELOPMENT

Instech Solution has been delivering impactful and engaging web products for leading companies across the majority of industries for over 10 years. Leverage our unique and broad-ranging expertise to build a rich-festrong textured labor management portal, a speedy progressive web app, or even an AR-powered ecommerce store. We deliver comprehensive web development services with clear results and a clear development process.

We leverage the most advanced tools and latest technologies to create seamless designs.

Couples with colossal creativity, use of contemporary tools and astounding design for call-to-action, we deliver unsurpassed designs

BIOMETRIC ACCESS CONTROL

Lately, bio-metric access control, fingerprint recognition, and attendance systems have become critical necessity in government, small, medium and large enterprises. Governments across the nations have been using this technology for purposes like civil identity, law enforcement, border control, access control, employee identification, attendance, etc. Businesses have been using this for employee identification, access control, authentication, etc.

Bio-metrics have proved to be more efficient, faster and securer than traditional identification practices like ID cards, access cards, PINs and passwords. Modern technology has made it easy to connect to information systems and the network. They can share data with a server with centralize database. This has made easy to access bio-metric services from anywhere through internet. Once reserved for high facilities, now has reached in the pocket of the common man. Today, biometric recognition systems have come to the price point, where small businesses and even individuals can easily afford them for office/home security, attendance, employee/customer identification, membership management, point of sale, and many more.

We provides a wide range of access control and bio-metric systems that satisfies your requirement and fits your budget across Kutch. Whether you have single or multi-location, single or multi doors; we can create a reliable and scalable security system to manage your business more efficiently. We deal with multiple brands of bio-metric devices like Honeywell, Bosch, Essl, CP-plus, etc.

HARDWARE AND SOFTWARE SUPPORT

Some types of IT services, like hardware installation, support and maintenance tend to be outsourced on-demand as it usually involves work like repairs or replacement of outdated equipment.

A professional provider will dispose of your hardware correctly, which includes formatting hard drives to wipe them of all potentially sensitive information (as simple data deletion poses a security risk).

IT departments are usually responsible for installing the computers, hard drives, printers, modems and routers that the business needs to operate successfully. On the other hand, wherever there are tons of hardware equipment, there is a constant need for repairs.

Repairing also includes troubleshooting for errors. Software services or software asset management (SAM) usually includes making sure that your licenses are always current and that your company is complying with various end-user agreements.

Additionally, the SAM service providers aim to reduce software costs by finding unused and redundant licenses.

IT services can also include software development companies' processes, i.e., the creation of custom-tailored applications that fulfill specific business needs.

Our growth has been based on maintaining relationships with our clients across a broad range of industries.
